

Services for  
Research  
Centres

## About us

Plàncton is a young, dynamic, enterprising company set up in 2012. We are flexible and aim to suit our clients' needs at all times. Our team is made up of marine science professionals such as biologists and oceanographers as well as a graphic designer, web designer and illustrator. We also have a network of collaborators including professional translators and scientific illustrators who complement our team.

## What we can offer:

- > Identity design
- > Website design using wordpress
- > Design and writing of texts and information explaining your work
- > Helping you to explain your projects to the general public
- > Design and organization of scientific workshops for all age groups
- > Organization of scientific events

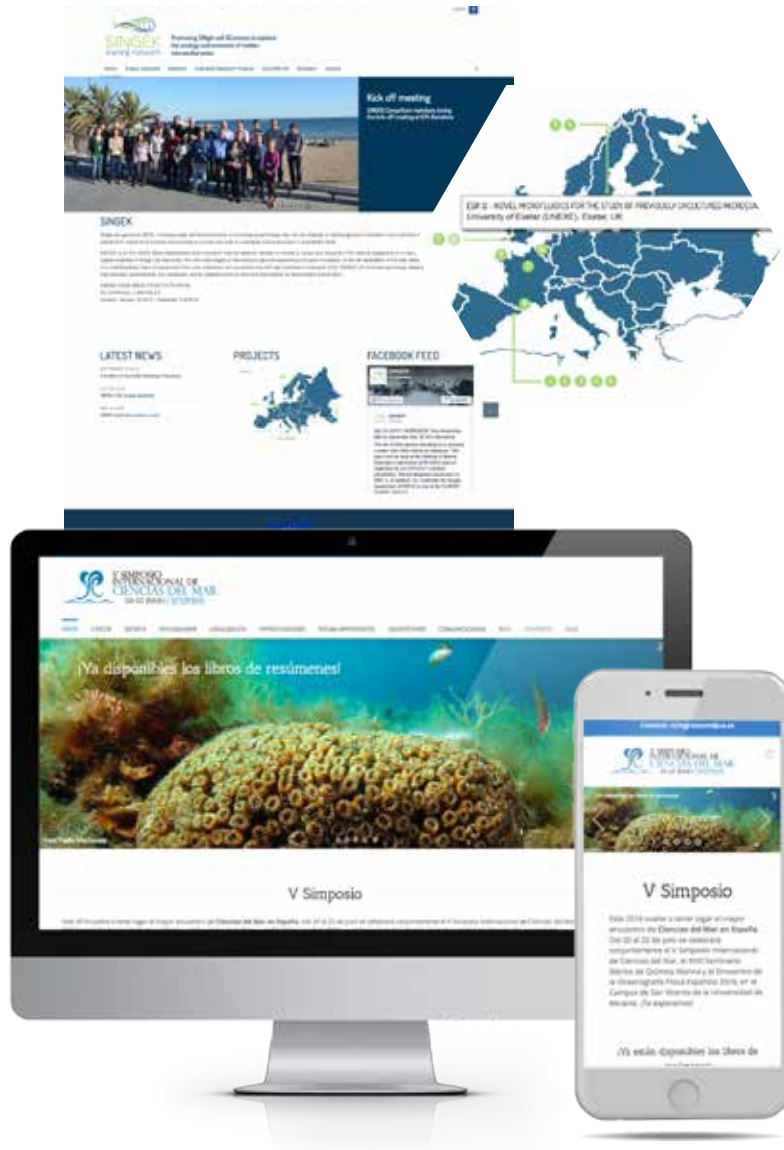

## Website design

Do you need a webpage for your project? Or, perhaps you already have one and want to update it?

Let us know what your needs are and we will offer you solutions: registration forms, online shop, mail management, intranet, contents, blogs, photo gallery, web statistics, and much more.

## Identity design

It is essential for a project to have its own visual identity and a striking and attractive logo and we can help you design yours!

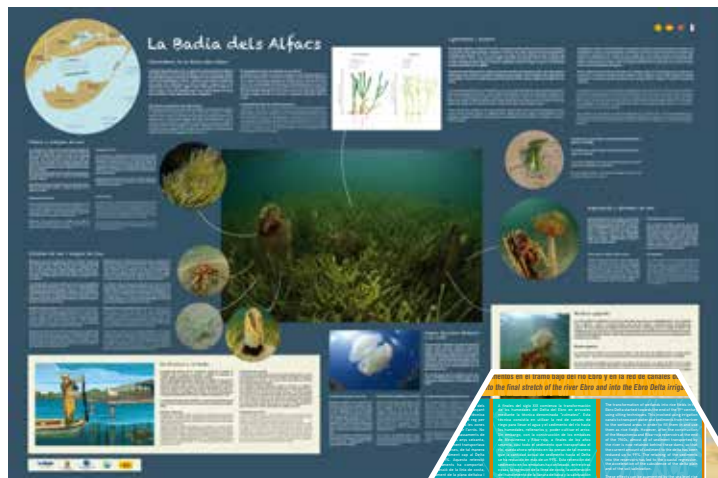

Here are some examples of webpages we have developed:

- Singek.eu
- Vsimposioccmar.com
- Ecopath.org
- Lifeebroadmiclim.eu

  
**SINGEK**  
training network

 **MEFISTO**

# Design and writing of texts and information explaining your work

It is not always easy to explain your project to the general public. We would like to be your personal "science translators", preparing and writing information about your research project suitable for all kinds of public.

## Informational boards:

- Marine life of the Alfacs Bay
- Life Ebroadmiclim project
- Marine life of l'Hospitalet de l'Infant coast

# Design and organization of scientific workshops for all age groups

Putting science within the reach of primary and secondary school students is a powerful tool for generating curiosity and an eagerness to study and work with science in the future. With our workshops we aim to show science projects to your students in a practical and fun way.

## Organization of scientific events

Are you trying to organize a congress, symposium or other scientific event and you are not sure where to start? Thanks to our experience, we can help you – webpage, registrations, social networks, supply management, merchandising, technical secretariat in situ... just tell us what you need!

## Helping you to explain your projects to the public

Perhaps your research group is not sure about how to incorporate communication and dissemination into your proposed research project. We can be your partners in this! We will work together with you to help with this side of your work.

- DMSP Symposium
- V Simposio Ciencias del Mar
- Final meeting Malaspina
- Ecopath
- Ramon Margalef Summer Colloquia

## ...and much more!

We also offer other services not directly linked to dissemination but which complement scientific activities, such as:

- > Logistical support on field trips and campaigns: do you need to gather samples or information and you need more technical staff to help out? Contract our services and we will help you collect samples, pilot boats, dive to carry out censuses, etc.
- > Hiring diving equipment: Plàncton also has a diving centre based at l'Ametlla de Mar and we can provide diving material and scuba tanks.
